

Personal Income by State, Third Quarter 2002

By G. Andrew Bernat, Jr. and John R. Kort

PERSONAL income for the Nation grew 0.9 percent in the third quarter of 2002, down from increases of 1.2 percent in the prior two quarters of 2002.¹ This third-quarter growth is 0.5 percentage point less than

1. Estimates of personal income are only available in current dollars. Percent changes from the preceding quarter are expressed at quarterly rates.

NOTE. The quarterly estimates of State personal income are prepared by the Regional Economic Measurement Division.

the average increase of 1.4 percent during the 1990s expansion. In the midst of the national slowdown in growth, one-half of the States grew at least as fast in the third quarter as in the second. Several large States—including California, New York, Texas, and Illinois—grew more slowly in the third quarter (table A). Growth ranged from 1.5 percent in Montana to 0.5 percent in Michigan (chart 1).

Table 1 at the end of this article presents the quarterly estimates of personal income for each State and

Chart 1. Personal Income: Percent Change 2002:II–2002:III

region, beginning with the fourth quarter of 1998. Table 2 presents the quarterly estimates of personal income by major source and of earnings by industry, beginning with the first quarter of 2001.

The slowdown in personal income reflected a down-

turn in rental income and decelerations in transfer payments and interest income. These changes were partly offset by an upturn in farm proprietors' income and a small step-up in wage and salary disbursements.

^r Revised.
^p Preliminary.

1. Percent changes are expressed at quarterly rates.
2. Ranks based on unrounded growth rates.

Personal income growth by component

Net earnings for the Nation grew 1.1 percent in the third quarter, compared with 0.8 percent in the second (table B).² Net earnings increased in all States in the third quarter, and 37 States recorded faster growth in the third quarter than in the second. In contrast, net earnings had declined in 14 States in the second quarter.

Transfer payments grew more slowly in the third quarter than at any time since the third quarter of 2000. Growth in transfer payments picked up in only three States—California, Vermont, and Alaska. The widespread slowdown in transfer payments was partly attributable to a substantial deceleration in State unemployment insurance benefits, as the unemployment rate dipped to 5.7 percent in the third quarter from 5.9 percent in the second. State unemployment insurance benefits declined in 37 States. However, unemployment benefits increases in California, Oregon, Washington, Vermont, and New Jersey had relatively large effects on total personal income in these States. Except

2. Net earnings is calculated as earnings by place of work less personal contributions for social insurance plus an adjustment that converts these earnings to a place-of-residence basis. Earnings by place of work is the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income.

Net earnings is used to analyze changes in the composition of personal income; earnings by place of work is used to analyze changes in the industrial structure of earnings. Net earnings by industry is not available, because the source data used to adjust earnings to a place-of-residence basis are not available by industry and because personal contributions for social insurance are not estimated by industry. For the definitions of the components of earnings, see U.S. Bureau of Economic Analysis, *State Personal Income, 1929–97* (Washington, DC: U.S. Government Printing Office, 1999), or go to BEA's Web site at <www.bea.gov/bea/mp.htm>, and look under "Regional programs" for "State Personal Income, 1929–97."

for Vermont, these States had increases in extended benefits, which are available to workers who have exhausted regular unemployment insurance benefits during periods of high unemployment.

Property income (dividends, interest, and rent) declined 0.2 percent in the third quarter, in contrast to an increase of 1.9 percent in the second. In all States, rental income and interest income declined, but dividend income increased. The downturn in rental income reflected an upturn in expenses, specifically closing costs associated with mortgage originations, spurred by record refinancing in the quarter. Lower interest income reflected lower short-term and long-term interest rates.

Earnings growth by industry

For the Nation, services, government, and finance, insurance, and real estate contributed 0.8 percentage point to the 1.1-percent growth in earnings in the third quarter (table C). Earnings growth in services contributed the most to total earnings growth in 34 States, and in most of the other States, earnings growth in government was the major contributor. In Idaho, New Mexico, Wyoming, and North Dakota, farming was the major contributor, and in Nebraska, earnings in nondurable-goods manufacturing was the major contributor. Manufacturing earnings registered a small increase for the Nation, but earnings in durable goods declined in 19 States—particularly in Michigan, Mississippi, and Connecticut—and earnings in nondurable goods declined in 14 States. The remaining five industries accounted for about a fourth of total net earnings growth among the States (chart 2).

Manufacturing earnings. Manufacturing earnings increased in the second and third quarters of 2002 after declining for six consecutive quarters, the longest series of declines in more than 30 years. In the recession in the early 1990s, manufacturing earnings declined for only two consecutive quarters, and in the recession in the early 1980s, manufacturing earnings declined for five consecutive quarters, but only one of these declines was as large as the declines in 2001 and 2002 (chart 3).

A consequence of the recent declines in manufacturing earnings was a further reduction in manufacturing's share of net earnings. In the third quarter of 2002, manufacturing accounted for 15.1 percent of total net earnings, down from 17.3 percent in the first quarter of 2000 and down from 25.1 percent in 1981. The decline in the importance of manufacturing as a source of earnings is evident in almost all States. For example, in the third quarter of 2002, manufacturing

Chart 2. Industry Composition of Net Earnings Growth, 2002:II–2002:III

accounted for 20 percent or more of net earnings in 10 States; Michigan had the highest share at 29 percent (table D). These shares are substantially lower than 10

years earlier, when manufacturing's share of net earnings exceeded 20 percent in nearly half the States and when the shares in Michigan, Indiana, Delaware, and

1. Net earnings is earnings by place of work—the sum of wage and salary disbursements (payrolls), other labor income, and proprietors' income—less personal contributions for social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis.

2. Dollar changes are expressed at annual rates.
NOTE: Estimates may not add to totals because of rounding.

Ohio were 30 percent or more. Over this 10-year period, North Dakota, South Dakota, and Nevada were the only States in which manufacturing's share of net

earnings increased; in each of these States, manufacturing accounted for a relatively small share of net earnings.

Table C. Earnings by Major Industry, by State and Region, 2002:^{III}

In general, the States with the highest manufacturing shares of net earnings had slower than average growth in overall net earnings in recent years (chart 4). Except for the last four quarters, the States with the highest manufacturing share of net earnings in the third quarter of 2002 had below-average growth in every quarter since the second half of 1995. The above-average growth in these States in the most recent quarters is partly due to a relative improvement in the manufacturing job market in these States. Preliminary evidence indicates that job losses may have slowed more for the States with the highest manufacturing shares in the past three quarters than for other States.

Recent trends in State personal income growth

Because quarter-to-quarter changes in State personal income are subject to large swings, it is useful to look at the change in State personal income in the current quarter relative to the same quarter a year earlier. Table E and chart 5 show the growth in quarterly State personal income from the fourth quarter of 1999 through the third quarter of 2002.

U.S. personal income increased 3.3 percent from the third quarter of 2001 to the third quarter of 2002, up from an increase of 2.7 percent from the second quarter of 2001 to the second quarter of 2002. After peaking at an 8.7-percent annual increase in the third quarter of 2000, the annual change in U.S. personal income slowed through the fourth quarter of 2001 and picked up thereafter. Similar growth trends are evident for the top-growth and bottom-growth quintile States, where

Chart 4. Change in Total Net Earnings: Four-Quarter Moving Average

the quintiles are based on income growth in third quarter of 2002 (chart 1). However, these top-quintile States have not always out-performed the other quintiles. Growth in personal income has been higher in

the top-quintile States than in the bottom-quintile States since the fourth quarter of 2000; previously, the growth in the top-quintile States was slower than average (chart 4).

NOTE. Percent changes are calculated as growth from the previous year's quarter to the current quarter. States are shown ranked according to 2001:III–2002:III growth rates.

In 38 States, personal income grew faster from the third quarter of 2001 to the third quarter of 2002 than it did from the second quarter of 2001 to the second quarter of 2002. Third-quarter to third-quarter growth ranged from 5.2 percent in Nebraska to 1.9 percent in New York, Connecticut, and Colorado. Annual U.S. personal income growth was the strongest since the second quarter of 2001.

Tables 1 and 2 follow.

Chart 5. Growth in Personal Income from the Same Quarter a Year Earlier

Upcoming Comprehensive Revisions of State and Local Area Personal Income

In the spring of 2004, BEA plans to release the results of comprehensive revisions of State personal income and of local area personal income.¹ These revisions will incorporate the results of the upcoming comprehensive revision of the national income and product accounts (NIPA's), which is scheduled for release in late 2003.²

As in the past, the annual revision of State personal income that would normally be scheduled for this September will instead be combined with the upcoming comprehensive revision. The regular release of the preliminary annual State estimates for 2002 will be on April 23, 2003; in July, there will be a limited revision to those estimates that will incorporate the fourth-quarter 2002 tabulations by the Bureau of Labor Statistics of data on employment and wages for workers covered by State unemployment insurance.

The next regular release of the local area estimates, which will cover 1999–2001, will be on May 6, 2003.

1. Comprehensive revisions, which are usually prepared about every 5 years, provide the opportunity for BEA to introduce major improvements into its economic accounts.

2. For information on the comprehensive revision of the NIPA's, including a list of several major improvements that are being considered, see "Note on the Upcoming Comprehensive Revision of the National Income and Product Accounts," SURVEY OF CURRENT BUSINESS 82 (November 2002): 6; and Stephanie H. McCulla and Carol E. Moylan, "Preview of Revised NIPA Estimates for 1997," SURVEY 83 (January 2003): 10–16.

Note. The personal income level shown for the United States is derived as the sum of the State estimates. It differs from the estimate of personal income in the national income and product accounts (NIPA's) because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. In particular, it differs from the NIPA estimate because, by definition,

tion, it omits the earnings of Federal civilian and military personnel stationed abroad and of the U.S. residents employed abroad temporarily by private U.S. firms.
