

**Technical Note**  
Gross Domestic Product  
Third Quarter of 2006 (Preliminary)  
November 29, 2006

This technical note provides background information about the source data and estimating methods used to produce the estimates presented in the GDP news release. The complete set of estimates for the third quarter is available on BEA's Web site at [www.bea.gov](http://www.bea.gov); a brief summary of "highlights" is also posted on the Web site. In a few weeks, the estimates will be published in BEA's monthly journal, the *Survey of Current Business*, along with a more detailed analysis of the estimates ("GDP and the Economy").

### **Sources of Revision to Real GDP**

The real GDP growth rate in the third quarter was revised from 1.6 percent to 2.2 percent (annual rate).

- Imports were revised down, reflecting newly available Census goods data for September and revised data for August.
- Inventory investment was revised up, reflecting newly available Census Bureau inventory data for September and revised data for August.

### **Corporate Profits**

Profits from current production increased \$66.2 billion, or 4.2 percent (quarterly rate), in the third quarter, after increasing \$22.7 billion, or 1.4 percent, in the second. Compared to the same quarter a year ago, profits increased 30.9 percent. The strong year-over-year growth in profits reflected the effects of Hurricanes Katrina and Rita, which reduced profits for the third quarter of 2005 about \$165 billion.

### **Revisions to Wages and Salaries and Disposable Personal Income**

In addition to presenting preliminary estimates for the third quarter, today's news release also presents revised estimates of second-quarter wages and salaries, personal taxes, and contributions for government social insurance. Wage and salary disbursements are now estimated to have increased \$10.8 billion in the second quarter, a downward revision of \$100.3 billion. These estimates reflect newly available wage-and-salary tabulations for the second quarter from the Bureau of Labor Statistics quarterly census of employment and wages. These data are more comprehensive than the monthly employment and earnings data that were used for the earlier estimates—they include the pay of supervisors and irregular pay, such as bonuses and gains from the exercise of stock options. Real disposable personal income is now estimated to have decreased 1.5 percent in the second quarter and to have increased 3.7 percent in the third. (By comparison, the estimates that were available last month showed an increase of 1.7 percent in the second quarter and an increase of 3.7 percent in the third.)

**Table A.--SOURCE DATA FOR THE ADVANCE AND PRELIMINARY ESTIMATES OF GDP FOR THE THIRD QUARTER OF 2006**

This table shows the actual data used for the preliminary estimate of GDP for the third quarter of 2006. For these key series, actual data for September were not available in time for inclusion in the advance GDP estimate released on October 27, 2006, and BEA made assumptions for these source data. The numbers in brackets show the September values that had been assumed for the advance estimate. For most series, the data incorporated for August and, in some cases, for July, were preliminary, and the numbers shown in brackets are the values used last month.

All series shown in the table are in billions of dollars, seasonally adjusted at annual rates, and are published by the Bureau of the Census.

	2006					
	Apr.	May	Jun.	Jul.	Aug.	Sep.
<b>Private fixed investment:</b>
