This guide provides detailed descriptions of each of the industry and foreign trade classification categories to be used in completing BEA’s international surveys. Industry classifications described in the first part of this guide are used to determine the type of business conducted by the entity being reported (pages 2-50). Foreign trade classifications, described in the second part of this guide (pages 51-54), are used to classify, by product, U.S. exports and imports of goods.
PART I.--INDUSTRY CLASSIFICATIONS

The international surveys industry (ISI) classifications described here are to be used when completing the industry classifications items in BEA’s surveys of direct investment and services. The classifications and their code numbers were adapted by BEA from the 2002 North American Industry Classification System (hereafter referred to as the “2002 NAICS”). Industry classifications in the previous version of this guide were adapted from the 1997 North American Industry Classification System.

Reflecting the changes made to the NAICS for 2002, the new 2002 NAICS-based ISI classifications differ from the 1997 NAICS-based ISI classifications for the Construction, Wholesale Trade, and Information sectors. If you have activities in these sectors, please classify them carefully using the new ISI codes. In the Construction sector, changes were made to better reflect similar production processes (in accordance with the NAICS conceptual framework); in the Wholesale Trade sector, changes were made to differentiate between businesses that take title to goods and those that do not, and to better capture the emergence of business-to-business electronic markets; and in the Information sector, new classifications were added to recognize new and emerging activities, particularly for Internet-related activities and telecommunications services.

For reporting on BEA surveys, 205 individual ISI classifications were adapted from the 2002 NAICS, and each has been assigned a four-digit numerical code. (The previously used NAICS-based 1997 ISI classifications had 197 four-digit codes.) The titles of some ISI classifications, by themselves, may not be sufficiently descriptive to classify certain activities. More information on the content of each classification is provided in the detailed definitions below. For some classifications, a “NOTE” given after the definition lists closely related activities NOT included in the classification being defined and the ISI codes for those activities.

For the convenience of those U.S. reporters familiar with the 2002 NAICS, the 2002 NAICS code or codes that correspond to a given ISI classification are shown in parentheses under the heading of each ISI classification. Because differences between a given ISI classification and the corresponding 2002 NAICS classification(s) may exist, the detailed definitions of the ISI classifications should be consulted when completing industry classification items in the survey.

The agriculture, forestry, fishing, and hunting sector (ISI codes 1110-1150) comprises businesses that are engaged in growing crops, raising animals, harvesting timber, and harvesting fish and other animals from a farm, ranch, or their natural habitats. The sector distinguishes two basic activities: agricultural production and agricultural support activities. Agricultural production includes businesses performing the complete farm or ranch operation, such as farm owner-operators, tenant farm operators, and sharecroppers. Agricultural support activities include businesses that perform one or more activities associated with farm operation, such as soil preparation, planting, harvesting, and management, on a contract or fee basis.

MINING

The mining sector (ISI codes 2111–2133) comprises businesses that extract naturally occurring mineral solids, such as coal and ores; liquid minerals, such as crude petroleum; and gases, such as natural gas. The term mining is used in the broad sense to include quarrying, well operations, crushing, washing, and other operations performed at the mine site. This sector consists of two basic activities: (1) mine operation and (2) mining support activities. Mine operations are classified according to the natural resource mined. Businesses that mine and further process the mined materials into a finished product, are classified in manufacturing. For example, a business operating a granite quarry, producing dimension stone, and further shaping the dimension stone into building stone would be classified in manufacturing.

CONSTRUCTION

The construction sector (ISI codes 2360-2380) comprises businesses engaged in the construction of buildings or engineering projects (e.g., highways and utility systems). Work performed includes new work, additions, alterations, or maintenance and repairs. This sector includes businesses engaged in the preparation of sites for new construction and businesses engaged in the subdividing of land for sale as building sites.

Businesses engaged in performing specific activities (e.g., pouring concrete, site preparation, plumbing, painting, electrical work) involved in building construction or other activities that are similar for all types of construction but that are not responsible for the entire project. The work performed may include new work, additions, alterations, or maintenance and repairs.

Examples of businesses in this industry are:
- Carpentry and floor contractors
- Electrical contractors
- Foundation, structure, and building exterior contractors
- Heating and air-conditioning contractors
- Masonry and drywall contractors
- Plumbing contractors
- Roofing, siding, and sheet metal contractors
- Site preparation contractors

NOTE — Special trade contractors performing work relating to heavy construction, such as grading for highways are classified in ISI code 2370.
MANUFACTURING

The manufacturing sector (ISIC codes 3111–3399) comprises businesses engaged in the mechanical, physical, or chemical transformation of materials, substances, or components into new products. The assembling of component parts of manufactured products is considered manufacturing, except in cases where the activity is classified in Construction (e.g., structures).

Manufacturing businesses acquire materials that are products of agriculture, forestry, fishing, mining, and quarrying as well as products of other manufacturing businesses. A business may process the materials itself or may contract with another manufacturer to perform the processing on materials which they provide to the other manufacturer. Both types of businesses are included in manufacturing.

The product produced by a manufacturer may be finished for final consumption or it may be a material input for an entity engaged in further manufacturing. For example, the product of an alumina refinery is the input used in the primary production of aluminum; primary aluminum is the input to an aluminum wire drawing plant; and aluminum wire is the input for a fabricated wire product manufacturer.

Within the manufacturing sector, the individual industries generally reflect distinct production processes related to material inputs and production equipment. In the machinery area, where assembling is a key activity, parts and accessories for manufactured products are classified in the industry of the finished manufactured item when they are made for sale separately. For example, a replacement refrigerator door would be classified with refrigerators and an attachment for a piece of metal working machinery would be classified with metal working machinery. However, components and inputs from other manufacturers are classified based on the production function of the component manufacturer.

Some borderline activities that are classified in manufacturing are:
- Apparel jobbing (assigning of materials to contract factories or shops for fabrication or other contract operations) as well as contracting on materials owned by others
- Aircraft and aerospace research and development
- Electroplating, plating, metal heat treating, and polishing for the trade
- Fabricating signs and advertising displays
- Fresh fish packaging (oyster shucking, fish filleting)
- Lapidary work for the trade
- Machine shop work

Some borderline activities that are not classified in manufacturing are:
- Logging is classified in Agriculture, Forestry, Fishing, and Hunting (ISIC codes 1110–1150).
- The dressing and beneficiating of ores is classified in Mining (ISIC codes 2111–2133).
- The construction of structures and fabricating operations performed at the site of construction by contractors is classified in Construction (ISIC codes 2360–2380).
- The breaking of bulk and redistribution in smaller lots, including packaging and repackaging products, such as liquors or chemicals; the customized assembly of computers; sorting of scrap; mixing paints to customer order; and cutting metals etc. to customer order are classified in Wholesale or Retail Trade (ISIC codes 4231–4540).
- Publishing and the combined activity of publishing and printing is classified in Information (ISIC codes 5111–5191). Although the activity performed is the transformation of information into a product, the value of the product to the consumer lies in the information content, not in the format in which it is distributed (i.e., the book, the software diskette).

3111 Animal foods

(2002 NAICS code 3111)

Businesses engaged in manufacturing food and feed for animals from ingredients such as grains, oilseed mill products, and meat products.

WHOLESALE TRADE

The wholesale trade sector (ISI codes 4231-4251) comprises businesses engaged in wholesaling merchandise, generally without transformation, and rendering services incidental to the sale of merchandise.

The wholesaling process is an intermediate step in the distribution of merchandise. Wholesalers are organized to sell or arrange the purchase or sale of (a) goods for resale (goods sold to other wholesalers or retailers), (b) capital or durable nonconsumer goods, and (c) raw and intermediate materials and supplies used in production.

Wholesalers sell merchandise to other businesses and normally operate from a warehouse or office. These warehouses and offices are characterized by having little or no display of merchandise. In addition, neither the design nor the location of the premises is intended to solicit walk-in traffic. Wholesalers do not normally use advertising directed to the general public. Customers are generally reached initially via telephone, in-person marketing, or by specialized advertising that may include Internet and other electronic means.

Although in general, wholesaling normally denotes sales in large volumes, durable nonconsumer goods may be sold in single units. Sales of capital or durable nonconsumer goods used in the production of goods and services, such as farm machinery, medium and heavy duty trucks, and industrial machinery are included in wholesale trade.

The sector comprises two main types of wholesalers: (1) merchant wholesalers that sell goods on their own account and (2) business to business electronic markets, agents, and brokers that arrange sales and purchases for others generally for a commission or fee.

(Cultural products are those that directly express attitudes, opinions, ideas, values, and artistic creativity; provide entertainment; or offer information and analysis concerning the past and present.)

The unique characteristics of information and cultural products, and of the processes involved in their production and distribution, distinguish businesses in the Information sector from those in other sectors. Some of these characteristics are:

1. Unlike traditional goods, an “information or cultural product” such as an on-line newspaper or a television program does not necessarily have tangible qualities, nor is it necessarily associated with a particular form.

2. Unlike traditional services, the delivery of informational and cultural products does not require direct contact between the supplier and the consumer.

3. The intangible property aspect of information and cultural products makes the processes involved in their production and distribution different from goods and services. Only those possessing the rights to these works are authorized to reproduce, alter, improve, and distribute them.

4. Distributors of information and cultural products often add value to the products they distribute. For instance, broadcasters may add advertising to the original product. This capacity means that unlike other distributors of goods and services, some information distributors may derive revenue not from the sale of the distributed product to the final consumer, but from those who pay for adding information to the original product.

Other types of parts are classified in the same category as the vehicles only when shipped with the vehicles; when shipped separately, such parts are classified in other categories, according to the type of material or the general function of the part. As examples, if shipped separately from vehicles: tires and tubes, gaskets, automotive glass and mirrors, springs, locks, hinges, and other automotive hardware are in "Other Products;" internal combustion piston engines and parts, turbines and parts, fuel-injection pumps, fans and blowers, air conditioners, and transmission shafts and cranks are in "Industrial Machinery and Equipment;" and radios, storage batteries, lighting and signaling equipment, windshield wipers, spark plugs, and electrical equipment for engines and vehicles are in "Telecommunications, Sound Equipment, and Other Electrical Machinery and Parts."
