Personal Income and Outlays, March 2022

Personal income increased \$107.2 billion (0.5 percent) in March, according to estimates released today by the Bureau of Economic Analysis (tables 3 and 5). **Disposable personal income** (DPI) increased \$89.7 billion (0.5 percent) and **personal consumption expenditures** (PCE) increased \$185.0 billion (1.1 percent).

Real DPI decreased 0.4 percent in March and **Real PCE** increased 0.2 percent; goods decreased 0.5 percent and services increased 0.6 percent (tables 5 and 7). The **PCE price index** increased 0.9 percent. Excluding food and energy, the PCE price index increased 0.3 percent (table 9).

COVID-19 Impact on March 2022 Personal Income and Outlays

In March, federal pandemic-related assistance programs continued to taper off. The full economic effects of the COVID-19 pandemic cannot be quantified in the personal income and outlays estimate because the impacts are generally embedded in source data and cannot be separately identified. For more information, see Effects of Selected Federal Pandemic Response Programs on Personal Income.

The increase in personal income in March primarily reflected an increase in compensation, proprietors' income, personal income receipts on assets, and government social benefits (table 3). Within compensation, the increase reflected increases in both private and government wages and salaries. The increase in proprietors' income was in farm income, reflecting increased crop and livestock prices. The increase in personal income receipts on assets was led by personal interest income. The increase in government social benefits was led by Medicare and Medicaid.

The \$185.0 billion increase in current-dollar PCE in March reflected an increase of \$114.6 billion in spending for services and an increase of \$70.4 billion in spending for goods (table 3). Within services, increases were widespread across all subcomponents and led by "other" services (which includes international travel) as well as food services and accommodations. Within goods, an increase in nondurable goods (led by gasoline and other energy goods) was partly offset by a decrease in spending on durable goods (led by motor vehicles and parts). Spending on food services as well as most categories of goods reflect updated Census retail sales data that were recently benchmarked to results from the most recent annual survey. Detailed information on monthly PCE spending can be found on Table 2.3.5U.

Personal outlays increased \$188.9 billion in March (table 3). **Personal saving** was \$1.15 trillion in March and the **personal saving rate**—personal saving as a percentage of disposable personal income—was 6.2 percent (table 1).

The **PCE price index** for March increased 6.6 percent from one year ago, reflecting increases in both goods and services (table 11). Energy prices increased 33.9 percent while food prices increased 9.2 percent. Excluding food and energy, the PCE price index for March increased 5.2 percent from one year ago.

Annual Update of the National Economic Accounts

BEA will release results from the 2022 annual update of the National Economic Accounts, which includes the National Income and Product Accounts as well as the Industry Economic Accounts, on September 29, 2022. This update will present revised statistics for GDP, GDP by Industry, and gross domestic income that cover the first quarter of 2017 through the first quarter of 2022. Updated monthly personal income and outlays will be released on September 30, along with the August 2022 estimate. Refer to BEA's recent blog post, "National, Industry, and State Annual Updates Will Be United in 2022," for additional detail. More information on the 2022 annual update will be included on BEA's website as well as in a forthcoming Survey of Current Business article, "GDP and the Economy."

Updates to Personal Income and Outlays

Estimates have been updated for January and February. Revised and previously published changes from the preceding month for current-dollar personal income, and for current-dollar and chained (2012) dollar DPI and PCE, are provided below.

Definitions

Personal income is the income received by, or on behalf of, all persons from all sources: from participation as laborers in production, from owning a home or business, from the ownership of financial assets, and from government and business in the form of transfers. It includes income from domestic sources as well as the rest of world. It does not include realized or unrealized capital gains or losses.

Disposable personal income is the income available to persons for spending or saving. It is equal to personal income less personal current taxes.

Personal consumption expenditures (PCE) is the value of the goods and services purchased by, or on the behalf of, "persons" who reside in the United States.

Personal outlays is the sum of PCE, personal interest payments, and personal current transfer payments.

Personal saving is personal income less personal outlays and personal current taxes.

The *personal saving rate* is personal saving as a percentage of disposable personal income.

Current-dollar estimates are valued in the prices of the period when the transactions occurred — that is, at "market value." Also referred to as "nominal estimates" or as "current-price estimates."

Real values are inflation-adjusted estimates—that is, estimates that exclude the effects of price changes.

For more definitions, refer to the <u>Glossary: National Income</u> and Product Accounts.

Statistical conventions

Annual rates. Monthly and quarterly values are expressed at seasonally-adjusted annual rates (SAAR). Dollar changes are calculated as the difference between these SAAR values. For detail, refer to the FAQ "<u>Why does BEA publish</u> estimates at annual rates?"

Month-to-month percent changes are calculated from unrounded data and are not annualized.

Quarter-to-quarter percent changes are calculated from unrounded data and are displayed at annual rates. For detail, refer to the FAQ "<u>How is average annual growth</u> <u>calculated</u>?" and "<u>Why does BEA publish percent changes</u> <u>in quarterly series at annual rates?</u>"

Quantities and prices. Quantities, or "real" volume measures, and prices are expressed as index numbers with a specified reference year equal to 100 (currently 2012). Quantity and price indexes are calculated using a Fisher-chained weighted formula that incorporates weights from two adjacent periods (months for monthly data, quarters for quarterly data and annuals for annual data). For details on the calculation of quantity and price indexes, refer to Chapter 4: Estimating Methods in the <u>NIPA Handbook</u>.

Chained-dollar values are calculated by multiplying the quantity index by the current-dollar value in the reference year (2012) and then dividing by 100. Percent changes calculated from real quantity indexes and chained-dollar levels are conceptually the same; any differences are due to rounding. Chained-dollar values are not additive because the relative weights for a given period differ from those of the reference year. In tables that display chained-dollar values, a "residual" line shows the difference between the sum of detailed chained-dollar series and its corresponding aggregate.

r Revised

1. Includes actual employer contributions and actuarially imputed employer contributions to reflect benefits accrued by defined benefit pension plan participants through service to employers in the current period.

2. Social security benefits include old-age, survivors, and disability insurance benefits that are distributed from the federal old-age and survivors insurance trust fund and the disability insurance trust fund.

3. Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.

4. Consists of nonmortgage interest paid by households. Note that mortgage interest paid by households is an expense item in the calculation of rental income of persons.

5. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

6. Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of estimates for the first of the month and the first of the following month; the annual and quarterly estimates are averages of the monthly estimates.

1. Includes actual employer contributions and actuarially imputed employer contributions to reflect benefits accrued by defined benefit pension plan participants through service to employers in the current period.

2. Social security benefits include old-age, survivors, and disability insurance benefits that are distributed from the federal old-age and survivors insurance trust fund and the disability insurance trust fund.

3. Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.

4. Consists of nonmortgage interest paid by households. Note that mortgage interest paid by households is an expense item in the calculation of rental income of persons.

5. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

6. Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of estimates for the first of the month and the first of the following month; the annual and quarterly estimates are averages of the monthly estimates.

1. Includes actual employer contributions and actuarially imputed employer contributions to reflect benefits accrued by defined benefit pension plan participants through service to employers in the current period. 2. Social security benefits include old-age, survivors, and disability insurance benefits that are distributed from the federal old-age and survivors insurance trust fund and the disability insurance trust fund. 3. Medicare benefits include hospital and supplementary medical insurance benefits that are distributed from the federal hospital insurance trust fund and the supplementary medical insurance trust fund.

4. Consists of nonmortgage interest paid by households. Note that mortgage interest paid by households is an expense item in the calculation of rental income of persons.

5. The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

r Revised

1. Food consists of food and beverages purchased for off-premises consumption; food services, which include purchased meals and beverages, are not classified as food.

2. Consists of gasoline and other energy goods and of electricity and gas services.

3. Market-based PCE is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most imputed transactions (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.
