

## **News Release**

EMBARGOED UNTIL RELEASE AT 8:30 A.M. EDT, THURSDAY, MAY 26, 2022

BEA 22-20

Technical: Karl Rohrer (GDP) (301) 278-9083 <u>gdpniwd@bea.gov</u>

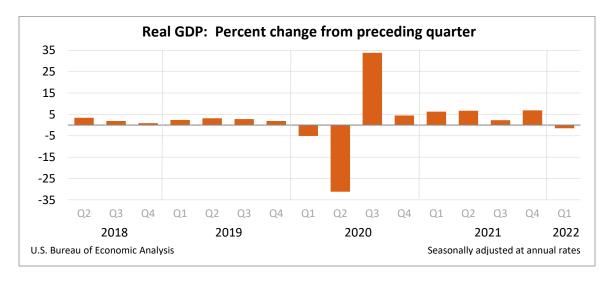

Kate Pinard (Corporate Profits) (301) 278-9417 <u>cpniwd@bea.gov</u>

Media: Jeannine Aversa (301) 278-9003 Jeannine.Aversa@bea.gov

# Gross Domestic Product (Second Estimate), Corporate Profits (Preliminary Estimate), First Quarter 2022

**Real gross domestic product** (GDP) decreased at an annual rate of 1.5 percent in the first quarter of 2022 (table 1), according to the "second" estimate released by the Bureau of Economic Analysis. In the fourth quarter, real GDP increased 6.9 percent.

The GDP estimate released today is based on more complete source data than were available for the "advance" estimate issued last month. In the advance estimate, the decrease in real GDP was 1.4 percent. The update primarily reflects downward revisions to private inventory investment and residential investment that were partly offset by an upward revision to consumer spending (refer to "Updates to GDP").

The decrease in **real GDP** reflected decreases in private inventory investment, exports, federal government spending, and state and local government spending, while imports, which are a subtraction in the calculation of GDP, increased. Personal consumption expenditures (PCE), nonresidential fixed investment, and residential fixed investment increased (table 2).

## **COVID-19 Impact on the First-Quarter 2022 GDP Estimate**

In the first quarter, an increase in COVID-19 cases related to the Omicron variant resulted in continued restrictions and disruptions in the operations of establishments in some parts of the country. Government assistance payments in the form of forgivable loans to businesses, grants to state and local governments, and social benefits to households all decreased as provisions of several federal programs expired or tapered off. The full economic effects of the COVID-19 pandemic cannot be quantified in the GDP estimate for the first quarter because the impacts are generally embedded in source data and cannot be separately identified. For more information, refer to the <a href="Technical Note">Technical Note</a> and <a href="Federal Recovery Programs">Federal Recovery Programs</a> and BEA Statistics.

The decrease in private inventory investment was led by decreases in wholesale trade (mainly motor vehicles) as well as mining, utilities, and construction (notably, utilities). Within exports, widespread decreases in nondurable goods were partly offset by an increase in "other" business services (mainly financial services). The decrease in federal government spending primarily reflected a decrease in defense spending on intermediate goods and services. The increase in imports was led by increases in durable goods (notably, nonfood and nonautomotive consumer goods).

The increase in PCE reflected widespread increases in services (led by housing and utilities). Within goods, an increase in durable goods (led by motor vehicles and parts) was offset by a decrease in nondurable goods (led by gasoline and other energy goods). The increase in nonresidential fixed investment reflected increases in equipment and intellectual property products.

**Current-dollar GDP** increased 6.5 percent at an annual rate, or \$381.5 billion, in the first quarter to a level of \$24.38 trillion. In the fourth quarter, GDP increased 14.5 percent, or \$800.5 billion (table 1 and table 3). More information on the source data that underlie the estimates is available in the "Key Source Data and Assumptions" file on BEA's website.

The **price index for gross domestic purchases** increased 8.0 percent (revised) in the first quarter, compared with an increase of 7.0 percent in the fourth quarter (table 4). **The PCE price index** increased 7.0 percent, compared with an increase of 6.4 percent. Excluding food and energy prices, the PCE price index increased 5.1 percent (revised), compared with an increase of 5.0 percent.

## **Personal Income**

**Current-dollar personal income** increased \$248.3 billion (revised) in the first quarter to a level of \$21.26 trillion. In the fourth quarter, personal income increased \$186.3 billion (revised). The increase primarily reflected an increase in compensation that was partly offset by a decrease in government social benefits (table 8). In the first quarter, government assistance payments in the form of social benefits to households decreased as provisions of several federal programs expired or continued to taper off.

**Disposable personal income** decreased \$7.5 billion (revised), or 0.2 percent, in the first quarter, in contrast to an increase of \$72.4 billion (revised), or 1.6 percent, in the fourth quarter. **Real disposable personal income** decreased 6.7 percent (revised), compared with a decrease of 4.5 percent (revised).

**Personal saving** was \$1.03 trillion (revised) in the first quarter, compared with \$1.45 trillion (revised) in the fourth quarter. The **personal saving rate**—personal saving as a percentage of disposable personal income—was 5.6 percent (revised) in the first quarter, compared with 7.9 percent (revised) in the fourth quarter.

## **Gross Domestic Income and Corporate Profits**

**Real gross domestic income** (GDI) increased 2.1 percent in the first quarter, compared with an increase of 6.3 percent (revised) in the fourth quarter. The **average of real GDP and real GDI**, a supplemental measure of U.S. economic activity that equally weights GDP and GDI, increased 0.3 percent in the first quarter, compared with an increase of 6.6 percent (revised) in the fourth quarter (table 1).

**Profits from current production** (corporate profits with inventory valuation and capital consumption adjustments) decreased \$66.4 billion in the first quarter, in contrast to an increase of \$20.4 billion in the fourth quarter (table 10).

**Profits of domestic financial corporations** decreased \$28.6 billion in the first quarter, compared with a decrease of \$1.3 billion in the fourth quarter. **Profits of domestic nonfinancial corporations** decreased \$21.1 billion, in contrast to an increase of \$5.0 billion. **Rest-of-the-world profits** decreased \$16.7 billion, in contrast to an increase of \$16.8 billion. In the first quarter, receipts increased \$21.3 billion, and payments increased \$38.0 billion.

## **Updates to GDP**

The decrease in first-quarter real GDP was revised down 0.1 percentage point from the "advance" estimate, primarily reflecting downward revisions to private inventory investment and residential fixed investment that were mostly offset by upward revisions to consumer spending and exports. Imports were revised up. For more information, refer to the <u>Technical Note</u>. For information on updates to GDP, refer to the "Additional Information" section that follows.

|   | Advance Estimate     | Second Estimate      |
|---|----------------------|----------------------|
| _   | (Percent change fror | n preceding quarter) |
| Real GDP                                  | -1.4                 | -1.5                 |
| Current-dollar GDP                        | 6.5                  | 6.5                  |
| Real GDI                                  |                      | 2.1                  |
| Average of Real GDP and Real GDI          |                      | 0.3                  |

| PCE price index                           | 7.0                  | 7.0                  |
| PCE price index excluding food and energy | 5.2                  | 5.1                  |

## **Updates to Fourth-Quarter Wages and Salaries**

In addition to presenting updated estimates for the first quarter, today's release presents revised estimates of fourth-quarter 2021 wages and salaries, personal taxes, and contributions for government social insurance, based on updated data from the Bureau of Labor Statistics Quarterly Census of Employment and Wages program. Wages and salaries are now estimated to have increased \$341.0 billion in the fourth quarter, an upward revision of \$66.6 billion. With the incorporation of these new data, real gross domestic income is now estimated to have increased 6.3 percent in the fourth quarter, an upward revision of 1.2 percentage points from the previously published estimate.

## **Annual Update of the National Economic Accounts**

BEA will release results from the 2022 annual update of the National Economic Accounts, which includes the National Income and Product Accounts as well as the Industry Economic Accounts, on September 29, 2022. This update will present revised statistics for GDP, GDP by Industry, and gross domestic income that cover the first quarter of 2017 through the first quarter of 2022. For details, refer to Information on Updates to the National Economic Accounts.

## **Definitions**

Gross domestic product (GDP), or value added, is the value of the goods and services produced by the nation's economy less the value of the goods and services used up in production. GDP is also equal to the sum of personal consumption expenditures, gross private domestic investment, net exports of goods and services, and government consumption expenditures and gross investment.

**Gross domestic income** (GDI) is the sum of incomes earned and costs incurred in the production of GDP. In national economic accounting, GDP and GDI are conceptually equal. In practice, GDP and GDI differ because they are constructed using largely independent source data.

**Gross output** is the value of the goods and services produced by the nation's economy. It is principally measured using industry sales or receipts, including sales to final users (GDP) and sales to other industries (intermediate inputs).

**Current-dollar estimates** are valued in the prices of the period when the transactions occurred—that is, at "market value." Also referred to as "nominal estimates" or as "current-price estimates."

**Real values** are inflation-adjusted estimates—that is, estimates that exclude the effects of price changes.

The *gross domestic purchases price index* measures the prices of final goods and services purchased by U.S. residents.

The *personal consumption expenditure price index* measures the prices paid for the goods and services purchased by, or on the behalf of, "persons."

**Personal income** is the income received by, or on behalf of, all persons from all sources: from participation as laborers in production, from owning a home or business, from the ownership of financial assets, and from government and business in the form of transfers. It includes income from domestic sources as well as the rest of world. It does not include realized or unrealized capital gains or losses.

**Disposable personal income** is the income available to persons for spending or saving. It is equal to personal income less personal current taxes.

**Personal outlays** is the sum of personal consumption expenditures, personal interest payments, and personal current transfer payments.

**Personal saving** is personal income less personal outlays and personal current taxes.

The *personal saving rate* is personal saving as a percentage of disposable personal income.

**Profits from current production**, referred to as corporate profits with inventory valuation adjustment (IVA) and capital consumption (CCAdj) adjustment in the National Income and Product Accounts (NIPAs), is a measure of the net income of corporations before deducting income taxes that is consistent with the value of goods and services measured in GDP. The IVA and CCAdj are adjustments that convert inventory withdrawals and depreciation of fixed assets reported on a tax-return, historical-cost basis to the current-cost economic measures used in the national income and product accounts. Profits for domestic industries reflect profits for all corporations located within the geographic borders of the United States. The rest-ofthe-world (ROW) component of profits is measured as the difference between profits received from ROW and profits paid to ROW.

For more definitions, refer to the <u>Glossary: National Income</u> <u>and Product Accounts</u>.

#### Statistical conventions

**Annual-vs-quarterly rates.** Quarterly seasonally adjusted values are expressed at annual rates, unless otherwise specified. This convention is used for BEA's featured, seasonally adjusted measures to facilitate comparisons with related and historical data. For details, refer to the FAQ "Why does BEA publish estimates at annual rates?"

Quarterly not seasonally adjusted values are expressed only at quarterly rates.

**Percent changes.** Percent changes in quarterly seasonally adjusted series are displayed at annual rates, unless otherwise specified. For details, refer to the FAQ "How is average annual growth calculated?" and "Why does BEA publish percent changes in quarterly series at annual rates?" Percent changes in quarterly not seasonally adjusted values are calculated from the same quarter one year ago. All published percent changes are calculated from unrounded data.

**Calendar years and quarters**. Unless noted otherwise, annual and quarterly data are presented on a calendar basis.

**Quantities and prices.** Quantities, or "real" volume measures, and prices are expressed as index numbers with a specified reference year equal to 100 (currently 2012). Quantity and price indexes are calculated using a Fisher-chained weighted formula that incorporates weights from two adjacent periods (quarters for quarterly data and annuals for annual data). For details on the calculation of quantity and price indexes, refer to Chapter 4: Estimating Methods in the NIPA Handbook.

Chained-dollar values are calculated by multiplying the quantity index by the current dollar value in the reference year (2012) and then dividing by 100. Percent changes calculated from real quantity indexes and chained-dollar levels are conceptually the same; any differences are due to rounding. Chained-dollar values are not additive because the relative weights for a given period differ from those of the reference year. In tables that display chained-dollar values, a "residual" line shows the difference between the sum of detailed chained-dollar series and its corresponding aggregate.

## **Updates to GDP**

BEA releases three vintages of the current quarterly estimate for GDP. "Advance" estimates are released near the end of the first month following the end of the quarter and are based on source data that are incomplete or subject to further revision by the source agency. "Second" and "third" estimates are released near the end of the second and third months, respectively, and are based on more detailed and more comprehensive data as they become available.

The table below shows the average revisions to the quarterly percent changes in real GDP between different estimate vintages, without regard to sign.

|                   | Average Revision                  |
|-------------------|-----------------------------------|
|                   | Without Regard to Sign            |
| Vintage           | (percentage points, annual rates) |
| Advance to second | 0.5                               |
| Advance to third  | 0.6                               |
| Second to third   | 0.3                               |

Note - Based on estimates from 1996 through 2020. For more information on GDP updates, refer to Revision Information on the BEA website.

Annual and comprehensive updates are typically released in late July. Annual updates generally cover at least the 5 most recent calendar years (and their associated quarters) and incorporate newly available major annual source data as well as some changes in methods and definitions to improve the accounts. Comprehensive (or benchmark) updates are carried out at about 5-year intervals and incorporate major periodic source data, as well as major conceptual improvements.

Unlike GDP, advance current quarterly estimates of GDI and corporate profits are not released because data on domestic profits and on net interest of domestic industries are not available. For fourth quarter estimates, these data are not available until the third estimate.

GDP by industry and gross output estimates are released with the third estimate of GDP.

r Revised. Revisions include changes to series affected by the incorporation of revised wage and salary estimates for the fourth quarter of 2021.

Note. Users are cautioned that particularly for components that exhibit rapid change in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series. For accurate estimates of the contributions to percent changes in real gross domestic product, use table 2.

<sup>1.</sup> Real gross domestic income is gross domestic income deflated by the implicit price deflator for gross domestic product.

Table 3. Gross Domestic Product: Level and Change from Preceding Period--Table Ends

r Revised. Revisions include changes to series affected by the incorporation of revised wage and salary estimates for the fourth quarter of 2021.

Note. Users are cautioned that particularly for components that exhibit rapid change in prices relative to other prices in the economy, the chained-dollar estimates should not be used to measure the component's relative importance or its contribution to the growth rate of more aggregate series. For accurate estimates of the contributions to percent changes in real gross domestic product, use table 2.

<sup>1.</sup> Real gross domestic income is gross domestic income deflated by the implicit price deflator for gross domestic product.

Table 4. Price Indexes for Gross Domestic Product and Related Measures: Percent Change from Preceding Period

r Revised

<sup>1.</sup> Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

<sup>2.</sup> This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

r Revised

<sup>1.</sup> Gross domestic income deflated by the implicit price deflator for gross domestic product.

<sup>2.</sup> Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

<sup>3.</sup> This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

Note. Estimates under the Percent change from the preceding year columns are calculated from annual data. Estimates under the Percent change from fourth quarter to fourth quarter columns are calculated from fourth quarter values relative to the same quarter one year prior.

r Revised. Revisions include changes to series affected by the incorporation of revised wage and salary estimates for the fourth quarter of 2021.

<sup>1.</sup> Gross domestic income deflated by the implicit price deflator for gross domestic product.

<sup>2.</sup> Food excludes personal consumption expenditures for purchased meals and beverages, which are classified in food services.

<sup>3.</sup> This index is a supplemental measure that is based on household expenditures for which there are observable price measures. It excludes most implicit prices (for example, financial services furnished without payment) and the final consumption expenditures of nonprofit institutions serving households.

r Revised. Revisions include changes to series affected by the incorporation of revised wage and salary estimates for the fourth quarter of 2021.

<sup>1.</sup> Personal income is also equal to national income less corporate profits with inventory valuation and capital consumption adjustments, taxes on production and imports less subsidies, contributions for government social insurance, net interest and miscellaneous payments, business current transfer payments (net), and current surplus of government enterprises, plus personal income receipts on assets, and personal current transfer receipts.

<sup>2.</sup> The current-dollar measure is deflated by the implicit price deflator for personal consumption expenditures.

r Revised. Revisions include changes to series affected by the incorporation of revised wage and salary estimates for the fourth quarter of 2021.

<sup>1.</sup> The current-dollar gross value added is deflated using the gross value added chain-type price index for nonfinancial industries from the GDP-by-industry accounts. For periods when this price index is not available, the chain-type price index for GDP goods and structures is used.

<sup>2.</sup> Chained-dollar consumption of fixed capital of nonfinancial corporate business is calculated as the product of the chain-type quantity index and the 2012 current-dollar value of the corresponding series, divided by 100.

<sup>3.</sup> Chained-dollar net value added of nonfinancial corporate business is the difference between the gross value added and the consumption of fixed capital.

<sup>4.</sup> The deflator for gross value added of nonfinancial corporate business divided by 100.

Note. Estimates in this table are based on the 2012 North American Industry Classification System (NAICS).
