End-Use Codes: A Primer

U.S. Bureau of Economic Analysis
Washington, DC 20233

301-278-9004 // www.bea.gov

The U.S. Bureau of Economic Analysis (BEA) classifies exports and imports of goods to and from the United States according to the end-use classification system. This system reclassifies commodity-level exports and imports into broader, more aggregated categories based on the principal use of the goods, allowing changes in trade to be compared with changes in production, consumption, and income.

The end-use system is based on the [Harmonized Tariff Schedule of the United States \(HTS\)](#) administered by the U.S. International Trade Commission for U.S. imports and on the [Schedule B export classification system](#) administered by the U.S. Census Bureau (Census) for U.S. exports. These commodity-level trade classifications are then grouped into end-use categories to reflect the intended use of the commodities and/or their stage of processing. End-use categories are available at the one-, two-, three-, and five-digit levels, with categories increasing in detail as the number of digits increases. The numeric codes are prefixed with a letter M for imports and X for exports. The broad two-digit categories are the same for imports and exports. There are differences in the detailed categories used for imports and exports based on the relative importance of certain products in the import and export accounts. For example, wheat and corn are in exports but not imports, while green coffee is in imports but not in exports. A full list of end-use codes is available in appendix 1 of this document. Appendix 2 provides a crosswalk between the categories shown in International Transactions Accounts “[Table 2.1 U.S. International Trade in Goods](#)” and their associated end-use categories.¹

1. [Additional information](#), including a crosswalk between end-use codes and HTS codes, is available from Census.
