1. In these descriptions, “new” indicates this is the first time that data from the specific source are being incorporated into the component estimate for the given year, and “revised” indicates that data from the specific source were incorporated previously and now revised data from that source are being incorporated.
2. Revisions reflect the annual revision of BEA’s international transactions accounts (ITAs). For more information, see Rudy Telles Jr., Nick Martinez, and Ted Peck, “[Annual Update of the U.S. International Transactions Accounts](#),” in the July 2020 *Survey of Current Business*.
3. The statistical discrepancy is gross domestic product (GDP) less gross domestic income (GDI); it is also the difference between gross national product (GNP) and gross national income (GNI), which is GDI plus net income receipts from the rest of the world. The statistical discrepancy arises because the product-side measures of GDP and GNP are estimated independently from the income-side measures of GDI and GNI.
